

# Visual Voicemail

This example is written for the **Canistracci OIL** tenant. Create the objects with a **Docs Demo** prefix, test them on non-production numbers, and then adapt the same structure for the production tenant.

Visual Voicemail is a neat feature you can configure on some phones. For now only Cisco is supported. It allows you to browse your voicemails from the phone keyboard and retrieve/listen/delete voicemails directly from the phone keyboard, without using the handset or dialing anything.

In Cisco, access the Advanced configuration, Phone section and configure any of the LINE Key as following, replacing the values accordingly to your PBX

fnc=xml;url=the PBX web address related application page

400px

If you phone doesn't support https, it can be needed to allow HTTP usage in Admin/Settings

Canistracci OIL example screen for Visual Voicemail.

# Validation

- Confirm the tenant selected in the top bar is Canistracci OIL before creating the example.
- Verify the created objects appear in the expected Configuration menu page.
- Place a controlled test call or run the related status check.
- Remove or disable temporary test numbers when the example is no longer needed.
