

Upgrading PHP to 8.4

Due to the upcoming security issue, it can be wise to upgrade the currently deployed PHP 8.1 to 8.4 on CentOS 9

```
dnf -y module switch-to php:remi-8.4/common
yum -y upgrade
cd /usr/local/src
\rm -r ioncube*
wget https://downloads.ioncube.com/loader_downloads/ioncube_loaders_lin_x86-64.tar.gz
tar xzvf ioncube_loaders_lin_x86-64.tar.gz
cp ioncube/ioncube_loader_lin_8.4.so /usr/lib64/php/modules/
```

Edit the /etc/php.ini and replace ioncube_loader_lin_8.1.so with 8.4 version

restart php-fpm using

```
service php-fpm restart
```

Upgrade MiRTA PBX with PHP 8.4 code

```
cd /var/www/html/pbx
wget http://devel.mirtapbx.com/manualupgrade.tar.gz
tar xzvf manualupgrade.tar.gz
\rm manualupgrade.tar.gz
cd /var/www/html/pbx/protected
php manualUpgrade.php
```
