# Overview

The **Themes** page in **Admin > Themes** controls host-name based branding for the MiRTA PBX web interface. A theme can change the selected UI package, Smartadmin layout behavior, logos, login-page text, menu additions, custom templates, and switchboard access behavior.

Each theme is selected by matching the requested web host against **Server Name Regex**. Keep the most specific host patterns for branded domains and use a broad expression only for the default theme.

<input type="checkbox"/>	Server Name Regex	Theme	Title	Favicon	Logo	Let's Encrypt SSL certificate status	Apache Config	Actions
<input type="checkbox"/>	*portal\,canistracci\,example\$	smartadmin	Canistracci Portal	 /assets/canistracci-favicon.png	 /assets/canistracci-logo.svg	<span>Valid</span> 2026-09-30		
<input type="checkbox"/>	*support\,docs-demo\,invalid\$	smartadmin	Support Console	 /assets/support-favicon.png	 /assets/support-logo.svg	<span>Valid</span> 2026-09-30		
<input type="checkbox"/>	*switchboard\,docs-demo\,invalid\$	smartadmin	Switchboard View	 /assets/board-favicon.png	 /assets/board-logo.svg	<span>Valid</span> 2026-09-30		

Themes list with fictional documentation theme entries.

## Working with themes

Action	Explanation
Create	Use <b>New Theme</b> from the Themes list, complete the host pattern and branding fields, then save.
Edit	Select a theme from the list by clicking the server-name regex, theme name, or title.
Duplicate	Use the duplicate action when a new branded domain should start from an existing theme.
Delete	Delete only unused themes. Removing the active catch-all theme can leave the login page without the expected branding.
Validate host matching	Test each branded hostname after saving. Regex patterns are powerful, so a broad expression can unintentionally match more hostnames than expected.

# Theme editor

The editor is split into sections. The screenshots use fictional documentation values and should not be saved directly on a production system.

Additional Status item menu:

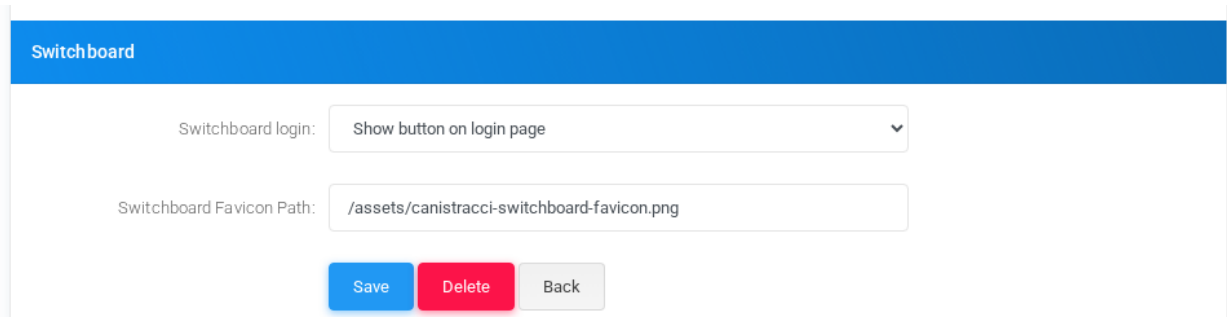

Additional Status/Stats item menu:

Additional Admin item menu:

Additional Bread item:

Additional Head entries:

Theme editor customization and login-page fields with fictional values.

Theme editor switchboard link and favicon options with fictional values.

## Field reference

Field	Description
Server Name Regex	Matches the HTTP host name that should use this theme. Use a precise expression for a branded domain, or a broad expression only for a catch-all default theme.
Theme	Selects the installed UI theme package. The standard value is <b>smartadmin</b> .
Fixed header	Keeps the page header visible while scrolling.
Fixed navigation	Keeps the navigation panel fixed while page content scrolls.
Menu on top	Moves the main navigation from the side panel to a horizontal top menu.
Push content	Pushes page content when the mobile navigation is opened.
Force RTL (Right to Left)	Forces right-to-left layout for languages or deployments that require it.
Boxed layout	Constrains the page width instead of using the full browser width.
Hidden Menu	Collapses the navigation until the user hovers over the visible navigation area.
Minify Menu	Shows a compact icon-oriented navigation menu.
Bigger Font	Increases the interface font size.
Skin	Chooses the Smartadmin skin, such as light, default, or dark.
Color	Applies one of the predefined Smartadmin color themes or a custom color file.

Field	Description
Other Body Classes	Adds extra Smartadmin body classes for advanced layout customization.
Provisioning host name	Overrides the host name shown in provisioning-related pages and generated provisioning links. Leave empty to inherit the configured host.
Title	Sets the browser tab title. Enable <b>Smart</b> to append page-specific information.
Top Title	Sets the title shown in the top application area. HTML can be used for custom branding when needed.
Bottom message	Sets the footer or bottom message shown in the interface.
Additional menu	Adds custom menu entries. The field can use variables such as tenant code, selected tenant, tenant name, and username.
Additional Configuration item menu	Adds custom entries under the Configuration menu.
Additional Status item menu	Adds custom entries under the Status menu.
Additional Status/Stats item menu	Adds custom entries under the Status/Stats menu grouping.
Additional Admin item menu	Adds custom entries under the Admin menu.
Additional Bread item	Adds custom breadcrumb content.
Additional Head entries	Adds custom HTML entries to the page head. Use only trusted markup.
Logo Path	Path or URL for the logo image used by the theme.
Favicon Path	Path or URL for the browser favicon.
Custom CSS	Path to an extra CSS file loaded by the theme.
Custom Javascript	Path to an extra JavaScript file loaded by the theme.
Custom Login tpl	Template file used to override the login page for this theme.
Do not apply CSP	When enabled, the login page for this theme does not receive the Content Security Policy header. This is useful for legacy custom login templates while they are being updated. Leave it disabled when the custom login page is CSP-compatible.
Custom topmenu tpl	Template file used to override the top menu.
Custom dashboard tpl	Template file used to override the dashboard.
Custom Webphone URL	Alternative webphone URL. Use <code>%%NAME%%</code> to substitute the extension username.
Custom Wallboard ProxyAPI URL	Alternative Proxy API base URL used by wallboard integrations.

Field	Description
Max number of menu items	Controls how many Configuration menu items are displayed before the interface condenses them. This is applied at login time.
Max number of destination items shown	Limits the number of items displayed inside destination selectors.
Max number of Data Table items shown	Controls when larger lists switch to a grid-style view.
Default number of Data Table items show	Default page length for DataTable lists.
No menu items	Hides the main menu for this theme.
No header	Hides the page header for this theme.
Language	Forces a language for this theme, or leaves it on automatic browser detection.
Company	Company name shown on the login page.
Company Message	Main message shown on the login page.
Company Sub Message	Secondary login-page message.
Multiple clusters portal	Adds the cluster portal link for deployments that expose several clusters.
Switchboard login	Controls whether the login page shows a switchboard button, redirects to switchboard login, or shows no switchboard link.
Switchboard Favicon Path	Path or URL for the favicon used only by the switchboard page. Leave empty to keep the browser default behavior for the switchboard.

# CSP and custom login templates

The **Do not apply CSP** option is intentionally theme-specific. It allows old or highly customized login templates to keep working while they are being made compatible with the login-page Content Security Policy. For a hardened login page, leave this option disabled and update the custom login template so all scripts, images, frames, and styles comply with the CSP rules.

## Operational notes

- Theme changes are evaluated at login and page-render time, so test both an authenticated page and the login page for each branded hostname.
- Custom CSS, JavaScript, template, and head-entry fields should point only to trusted files maintained by the PBX administrator.

- When using custom menus, keep links stable and avoid exposing tenant-specific administration links to users who should not access them.
- When Let's Encrypt or virtual-host creation is enabled in Admin Settings, the Themes list can also be used to review certificate and web-server configuration status.
