

Overview

The **Dashboards** page controls which counters, call graphs, and call-history panels appear on the main tenant dashboard, and the order in which they appear.

For the selected tenant, open **Configuration > Settings** and select **Dashboards**. To manage dashboards available to every tenant, open **Admin > Settings** and select **Dashboards**.

Access and scope

The user requires the **Can edit dashboards** privilege. Users with **Full Menu Configuration** receive this privilege automatically. The global view also requires access to **Admin Settings**.

View	Dashboards shown	Changes allowed
Tenant	Global dashboards and dashboards belonging to the selected tenant.	Create, edit, and delete tenant dashboards. Global dashboards can be assigned but not edited from this view.
Global	Dashboards available to every tenant.	Create and edit global dashboards. The global Default dashboard can be edited but cannot be renamed or deleted.

List columns

Column	Description
Name	The dashboard name. Select an editable name to open its layout.
Scope	Global means the dashboard is available to every tenant. Tenant means it belongs only to the selected tenant.
Items	Number of elements currently included in the dashboard layout.
Assigned	A check mark identifies the dashboard currently assigned to the selected tenant.

Column	Description
Action	The edit icon opens an owned dashboard. In tenant view, the check icon assigns an available dashboard to the selected tenant.

Create, edit, and assign

Task	How to do it
Create	Select New Dashboard , enter a name, arrange the required items, and select Save .
Edit	Select the dashboard name or its edit icon. Change its name or layout and select Save .
Assign	In tenant view, select the check icon in the Action column. The Assigned column moves to the selected dashboard immediately.
Delete	Select one or more editable rows and use the trash icon, then confirm. The global Default dashboard cannot be deleted.

Dashboard selection

A tenant can use one tenant dashboard or one global dashboard. If the assigned dashboard is unavailable or no tenant assignment exists, MiRTA PBX uses the configured global dashboard. If no valid global selection exists, it uses the global **Default** dashboard.

Deleting an assigned dashboard removes its assignment. The tenant then follows the same fallback rules the next time the main dashboard is opened.

Theme note: The configurable layout is rendered by the standard dashboard template. A theme that supplies its own custom dashboard template controls its own layout and may not display the selected arrangement.
